

Web Systems and Technologies 2

07/28/2026 Activity

1. Website Name

⇒ Spotify.com

2. Is it responsive?

⇒ Yes

3. What changes on Mobile?

⇒ It's designed for a mobile view. With the website on the phone, can't view *Library* as will advised to install the app. Still can access *Profile and Settings* but I can't see the notifications even was logged in.

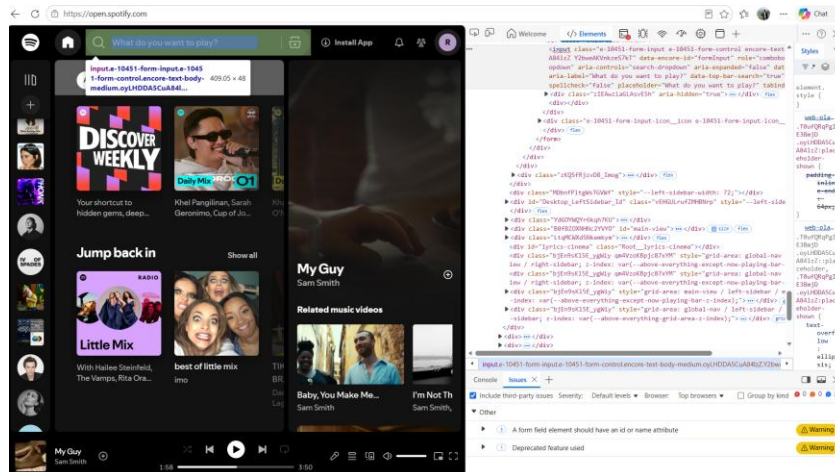

4. What changes on Desktop?

⇒ Aside from that it's on desktop view, *Library* is displayed right away on left-side. Notification is showing, can access *Profile and Settings*. It does also have a suggestion to install its app.

5. What do you like about the design?

⇒ The design is minimalist yet expressive. It's personalized and adaptive which is very cool about it. Users will really like to use it and subscribe not just because it's a music platform but with balance and modern design.

6. Screenshot Desktop

7. Screenshot Mobile
